TG-6 clock forecasts: historical failure versus subsequent accuracy
Does error persist after refitting?
How much does the earlier failure predict?
Following 14-day forecast error (RMS ns)
Earlier 14-day forecast error (RMS ns)
Forecasts exceeding error limits (%)
Following forecast horizon (days)
Passed earlier backtest
Failed earlier backtest
Failure: RMS > 50 ns or maximum > 150 ns. Same 2,296 complete trials across horizons; daily windows overlap.
